

ViCache+Filter – Data Sheet

“Double your Web Bandwidth - Increase your Employee Productivity”

ViCache+Filter is an enterprise-class open source based network caching solution that integrates seamlessly into any network topology. ViCache+Filter serves the contents to the user from the cache rather than from the origin server thereby significantly improving the response time for the web user.

- 7 x 24 Service provided by ViSolve Support Team.
- Browser based administration, live and historical reports.
- Plug and Play with your existing network environment.

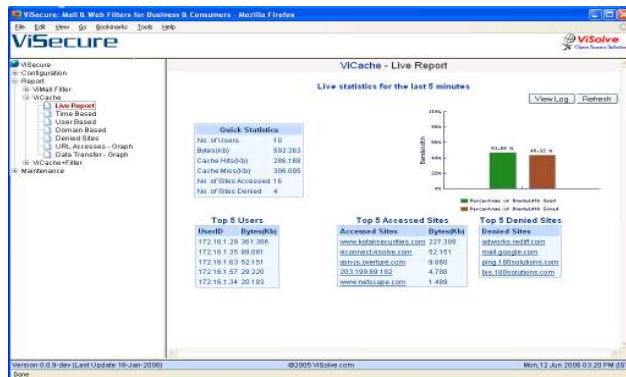

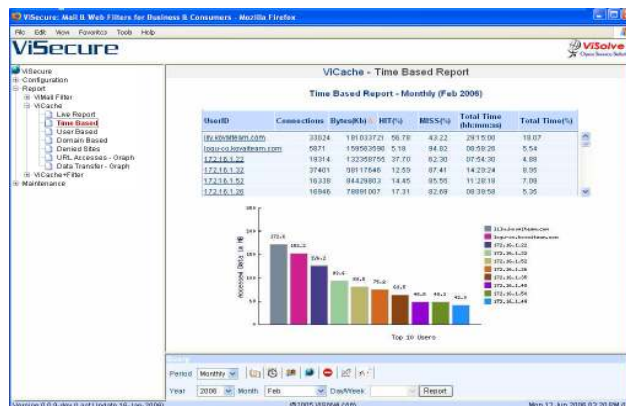

With ViCache+Filter - Corporates, SMBs, ISPs and Educational Institutions can see an average of 50% increase in network performance, Customize web content delivery at the edge of the network (closer to the user) and could take the load off the high traffic Internet backbone. In Reverse Proxy mode, ViCache+Filter off loads the work of the web servers by delivering the content from the cache.

Key Features

- Open Source based solution.
- Comprehensive GUI with Control options (IP, MAC, port, domain, user, time)
- Easy manageable web access to users and groups.
- HTTP, HTTPS and FTP support.
- Failover through WCCP routing.
- Network Management and Monitoring (SNMP).
- Activity Monitoring and Event logging.
- Controllable caching object size.
- Dynamic drill-down reporting.

Key Benefits

- You provide the hardware and we deploy the solution.
- Doubles the Network bandwidth and Better response time.
- Scalable by clustering or by WCCP.
- Provides easy to use GUI for configuration and monitoring.

Requirements

- Any Linux platform
